

Low Voltage General Purpose Brake Motors

Making you more competitive

ABB's General purpose motor is designed for use in general industry, meeting the demands of standard applications for OEM's. Motors are readily available from central stock locations and distributors around the world. The motors have high build quality, are available with all the features needed by the OEM market and can be modified to meet most specifications.

ABB (www.abb.com) is a leader in power and automation technologies that enable utility and industry customers to improve performance while lowering environmental impact. The ABB Group of companies operates in around 100 countries and employs about 120,000 people.

General Purpose Brake Motors

Totally enclosed squirrel cage three phase low voltage motors,

Brake motors in brief	27

ABB reserves the right to change the design, technical specification and dimensions without prior notice.

Mechanical design

Degrees of protection

The degrees of protection, as per IEC standards 60034-5, are: terminal box and electrical components of the brake – IP 55; other motor parts – IP 55.

Mechanical components of the brake – IP 23 S.

Mechanical parts of the brake, protected with a rubber ring and V-ring – IP 55 (optional: variant code 213).

Mounting arrangements of brake motors

The design of the brake motor enables it to operate in any mounting position. Nevertheless, the position of the drain holes should be taken into account.

Vertically mounted motors with the shaft end downwards, intended for outdoor operation, should be provided with a protective roof to avoid water ingress and the possibility of ice forming on the brake.

Operation

ABB's brake motor is a standard motor modified for braking duties, i.e. a three phase induction motor with standard dimensions and output rating.

The electro-magnetic disc brake is powered, by either DC current through a rectifier located in terminal box or three phase AC current.

When the brake coil is de-energised, the brake is actuated by spring pressure.

The axial movement of the brake disc performs a dual

braking action against the moving electromagnet and the motor shield, without pressure or impact being transmitted to the bearings.

The brake linings withstand high temperatures, have great wear resistance and give long life. Because of the very low wear of the braking disc, the brakes of the ABB motor usually require only one-third of the maintenance required by other common brake types in the market.

Lubrication and bearings

The bearings incorporate two Z-type non-friction sealing plates. The amount of grease is sufficient for the life of the bearing.

The motors are fitted with the bearings listed in the table.

Motor size		D-end	N-end

Brake design

General

Electromagnetic disc brakes work by the action of a set of springs and are released when applying voltage to the brake coil.

This means that the motor will brake automatically

in case of any voltage failure, as a significant safety feature. The brake is always functional, irrespective of the mounting position of the brake motor. The external dimensions for both the DC and the three phase AC brake are identical.

Brake disc

The brake lining is made from asbestos-free material. It is highly resistant to wear and has excellent thermal conductivity, thus giving consistent performance even at high temperatures.

The brake disc withstands a large number of braking operations and is insensitive to dust and moisture.

The core of the brake disc is grooved and made of special polyamide that absorbs impacts, enabling it to work with high vibration applications.

Readjusting the air gap

The brakes are supplied with the air gap adjusted to its nominal value.

The air gap has to be readjusted to its nominal value when the wear of the lining reaches the readjustment value (Xn) stated in table 1.

For this operation, work on the bushings (9) after releasing the bolts (3).

Tighten up the bushings in the magnet support (10) as required to reach the rated air gap value stated in table 1.

Tighten the bolts (3) to the specific torque, C (see table 1).

At the end of the operation, check that the air gap complies with the specified value and is uniform across the whole surface.

Replacing the brake disc

The brake disc must be replaced when reaching the minimum permissible lining thickness stated in Table 1.

Rectifier

The rectifier is a device for DC brake applications. It is highly resistant to temperature as well as to voltage peaks, and it includes an additional protection of the auxiliary contact of contactor. Its compact design enables it to be placed in the motor terminal box.

Connection for DC brake

The brake is fed via a rectifier. The voltage stated on the brake rating plate is that of the brake coil on the DC side of the rectifier.

The coil can operate reliably between of 90% and 110% of the rated voltage. For voltages outside these limits, please consult ABB.

Standard connection (t'21~)

Reconnection (t21=)

To obtain instant braking, please see table 2 (t21=), use the following diagram.

Reconnection (t21~)

When it is necessary to reduce the braking time, the connections should be modified according to the following diagram. The breaking of the circuit on the AC side is controlled by using an auxiliary contact of the contactor.

Connection of AC brake

The coil should only be used between 90% - 110% of its rated voltage.

Standard connection (t21)

Reconnection (t21f)

To obtain instant braking, the coil must be fed separately from the motor terminals.

Remark:

Regardless of whether a DC or AC brake is used, the brake is usually connected to the motor terminals of single-speed motors. It can, however, also be delivered with a separate brake supply (variant code 086). In case of two-speed motors, the brake is always connected separately. Separate brake connection is compulsory when the motor is driven by a frequency converter.

Hand release

The device is a lever used to override the action of the brake springs for as long as it is applied.

Hand release is included as standard, except for frame size 63, where it is available as option, see variant code 088.

When installing the release lever, please proceed as follows:

Remove the rubber protection, if fitted. Insert the screw (1) with its washer, position the spring (2) and washer (3) and tighten the nut (4) firmly. Fit the other washer and the square-head nut (5); adjust the position of the nut in relation to the moving magnet (Y value) with the central screw (1). When the required value is reached, tighten the inner nut (4) while holding nut (5) fixed.

Important: The use of the release lever needs periodic checking of the Y value and the air gap. The air gap should never exceed the maximum values stated in brake data table 1. Failure to check could result in malfunction due to mechanical locking of the armature.

M000130

Torque adjustment

In brake motors from frame size 71 up to 180, the braking torque can be adjusted from 100% up to 55% of the nominal torque as standard.

Instructions for how to regulate torque are delivered with the brake motor. These instructions describe how to loosen the torque regulation screw (13), as well as the relation between dimension A and torque.

Reduced braking torque, from 60% up to 33%, is available by using variant code 087 (applies for frame sizes 71-180).

M000131

Brake operating times

The operating times stated in brake data table 2 are valid for the nominal air gap and warmed-up brake coil.

t_1 = Brake release time.

t_{21} = Braking time.

U_2 = Rated voltage.

T_B = Nominal braking torque.

Brake release time = the time from when voltage is applied to the brake coil up to the ceasing of braking action.

Braking time = the time from when the current is switched off up to the starting of braking action.

M000132

Special brakes (with DC brake)

Two-speed motors with one or two windings, motors with 9 or 12 terminals, and motors that have to be started with star-delta connection, with brake coil for DC, are supplied with the rectifier fitted in the motor terminal box, without the two wires that normally connect it to the motor terminal. The AC supply to the rectifier is independent to the motor supply and should be fed by the main contactor.

The standard brake coil connection voltages for 50 and 60 Hz will be those stated in the following table, unless stated otherwise in the order:

¹⁾ H.W. = Half-wave rectifier, F.W. = Full-wave rectifier

²⁾ Special coil on request

³⁾ Available using variant code 285

Rectifier input voltage (V_{AC})	Rectifier type ¹⁾	D.C. coil brake voltage (V)

Moment of inertia	J (kgm ²)	1.5×10^{-5}	3.7×10^{-5}	7.5×10^{-5}	2×10^{-4}	3.7×10^{-4}	6.2×10^{-4}	10.4×10^{-4}	26.4×10^{-4}	
Weight	(kg)	0.8	1	1.6	2.7	4	5.2	9	16.2	

¹⁾ Braking torque after performing 10.000-15.000 operations.

²⁾ Delivered torque : Torque value marked on rating plate corresponding to the braking torque when the brake motor leaves the ABB factory. Tolerance of +/-10% of this value is accepted. Ambient conditions, temperature on friction surfaces, brake motor positioning and transport applied on the product can affect this value.

In general, all the variables mentioned above can affect the braking torque values, so if an accurate value is needed, ABB recommends it is measured in the real application. This allows adjustment to the required value by using the torque regulation facility.

Table 2.

Braking (t_{21}) and release (t_1) times

Brake motor sizes		63 A/B	71	80	90	100	112	132	160/180	
Brake type		75.5	88.6	100.6	120.6	140.6	155.6	170.6	206.6	
AC brake coil										
- release time	t_1 (ms)	5	6.6	5	5.1	5.5	5	5	5.5	
- standard braking time	t_{21} (ms)	25	25	30	40	50	50	65	105	
- fast braking time	t_{21f} (ms)	10	10	10	10	10	10	10	10	
DC brake coil										
- release time	t_1 (ms)	20	20	25	35	40	50	60	100	
- std connection time	t'_{21} (ms)	150	170	210	330	420	720	850	930	
- reconnection time	t_{21} (ms)	30	35	45	70	90	155	190	150	

When fast braking in AC brake is used, the contactor that is operating the coil of the brake has to be over dimensioned taking in consideration a high inductive load.

Calculations

Maximum number of connections per hour

The connection frequency that may be achieved with the motors is limited by the temperature rise that they undergo both in the coil and in the rotor. The brakes are designed so that they may withstand the kinds of duty for which these motors are intended.

The maximum number of connections per hour depends on:

- the power P_2 required after reaching the rated speed, i.e. the relative load P with regard to the rated power P_n .

$$P = \frac{P_2}{P_n} \times 100 \%$$

- the total inertia J in kgm^2 of the mass to be accelerated (inertia of the rotor J_m as per catalogue, plus the additional inertia J_b of the driven machine) in relation to the motor shaft, that is, J_b multiplied by the square of the coefficient of the load speed divided by the motor speed.

$$J = J_m + J_b \times \left[\frac{n_b}{n_m} \right]^2$$

- the relative duration factor for service S4.

$$S4 = \frac{\text{connection time}}{\text{connection time} + \text{downtime}} \times 100 \text{ in } \%$$

For calculations of the maximum number of connections/hour, please consult ABB.

Required data:

- Type of brake motor
- Load inertia reduced at motor shaft
- Required power P_2
- Type of service

Options

Separate brake supply

For brakes which need an independent supply, please note the variant code 086 and the voltage for feeding the brake. When the motor is supplied via a frequency converter, both in the case of DC and AC, the brake should be supplied separately at rated voltage (constant). The separate brake supply can be connected directly, no separate terminal box is needed.

Dust protection

To protect the brake disc against dust, the brake can be supplied with a rubber protection ring and V-ring.

Variant code 213 should be stated in the order.

Permitted friction work per operation

Friction work per operation must not exceed the WR_{\max} values stated in brake data table 1.

$$WR = \frac{1}{2} \times J \left[\frac{\pi \times n_m}{30} \right]^2 \text{ in joules}$$

Friction work per hour

The friction work can be calculated if the number of operations per hour is known.

This value must be equal to or less than the PR_{\max} stated in brake data table 1.

$$PR = WR \times c/h$$

Braking time

The total braking time from the disconnecting of brake until the machine is stopped is calculated as follows:

$$t = 104.6 \times \frac{J \times n_m}{T_B} + t_{21}$$

t and t_{21} are in ms

Maximum number of operations until wear of 0.1 mm

The service life, expressed in switching operations, can be calculated with the aid of the values $WR_{0.1}$ given in brake data table 1.

$$L_{0.1} = \frac{WR_{0.1}}{WR}$$

Number of operations before readjusting the air gap

With the X_n values in table 1 we can calculate the number of required operations until the readjustment of air gap becomes necessary.

$$Ln = \frac{X_n - X}{0.1} \times L_{0.1}$$

Braking torque reduction

Reduced braking torque range, from 60% up to 33%, is available by using variant code 087.

Protective roof

To protect motors from accumulation of water, ice or snow when installed outdoors in the vertical position and with the shaft downwards, the assembly should be fitted with a protective roof.

Variant code 005 should in this case be stated in the order.

Ordering information

When placing an order, please state the following minimum data in the order, as in the example.

The product code of the motor is composed in accordance with the following example.

Motor type	M3ARF 112M

¹⁾ Braking-torque ratio

²⁾ No-load (shaft-free) operations/hour

³⁾ Temperature rise class F.

The bullets in the product code indicate choice of mounting arrangement and voltage and frequency code, see below and ordering information page.

Code letters for supplementing product code for mounting arrangement:

Foot-mounted	A
Flange-mounted, 1 flange	B for frame sizes 63-100, 180; E for frame sizes 112-160.
Flange-mounted, 2 flanges	N for frame sizes 90-132
Flange-mounted, small flange	C for frame sizes 63-100

Code letters for supplementing product code for voltage and frequency (pos 13):

Motor size	S Motor			D Motor			X
	50 Hz	60 Hz	Brake (input rectifier voltage/brake voltage)	50 Hz	60 Hz	Brake (input rectifier voltage/brake voltage)	
63-132	220-240 VΔ 380-420 VY	250-280 VΔ	220-240 V/205 V d.c.	380-420 VΔ 660-690 VY	440-480 VΔ	380-420 V/178 V d.c.	Any other rated voltage or frequency, 690 V maximum connection for motor and 500 V for brake (input rectifier)
160-180	230 VΔ 400 VY	265 VΔ	230 V/205 V d.c.	400 VΔ 690 VY	460 VΔ	400 V/178 V d.c.	
Motor size	E Motor			F Motor			
	50 Hz		Brake (input rectifier voltage/brake voltage)	50 Hz		Brake (input rectifier voltage/brake voltage)	
63-80	–		–	500 VY		500 V/223 V d.c.	
90-180	500 VΔ		500 V/223 V d.c.	500 VY		500 V/223 V d.c.

¹⁾ Braking-torque ratio

The bullets in the product code indicate choice of mounting arrangement and voltage and frequency code, see below and ordering information page.

Code letters for supplementing product code for mounting arrangement (pos 12):

Foot-mounted	A
Flange-mounted, 1 flange	B for frame sizes 63-100, 180; E for frame sizes 112-160.
Flange-mounted, 2 flanges	N for frame sizes 90-132
Flange-mounted, small flange	C for frame sizes 63-100

Code letters for supplementing product code for voltage and frequency (pos 13):

Motor size	A		B		S		D	
	Motor 50 Hz	Brake 50 Hz	Motor 50 Hz	Brake 50 Hz	Motor 50 Hz	Brake 50 Hz	Motor 50 Hz	Brake 50 Hz
63-132	-	-	-	-	220-230 V	230 VΔ	380-400 V	400 VΔ
160	220 V	220 VΔ	380 V	380 VΔ	230 V	230 VΔ	400 V	400 VΔ
Motor size	E		H		X			
	Motor 50 Hz	Brake 50 Hz	Motor 50 Hz	Brake 50 Hz	Any other rated voltage or frequency, 690 V maximum			
63-132	500 V	500 VΔ	415 V	415 VΔ				
160	500 V	500 VΔ	415 V	415 VΔ				

General purpose brake motors - Variant codes

Code	Variant	M3VRF/S			M3ARF/S

¹⁾ Clearance holes for bolt.

²⁾ Optional for frame size 160.

³⁾ Two pieces modular flange.

Modular flanges:

Brake motors sizes 71-132 can be supplied with several non standard modular flange dimensions

Above table gives the main dimensions in mm.

For detailed drawings please see our web-pages 'www.abb.com/motors&generators' or contact us.

General purpose brake motors in brief, basic design

Motor size		63 A/B BB	71	80	90	100	112	132	160	180	
Stator and feet	Material	Die-cast aluminum alloy. Loose feet in sizes 63MA/MB-100 and 180; feet integrated with stator in sizes 63A/B, 112-160.									
	Paint colour shade Paint	Munsell blue 8B 4.5/3.25 / NCS 4822 BO5G / RAL 5014 Exoxy polyester powder paint, $\geq 30 \mu\text{m}$. 2-pack polyurethane paint, $\geq 20\mu\text{m}$.									
Bearing end shields	Material	Die-cast aluminum alloy.									
	Paint colour shade Paint	Munsell blue 8B 4.5/3.25 / NCS 4822 BO5G Epoxy polyester powder paint, $\geq 30 \mu\text{m}$. 2-pack polyurethane paint, $\geq 20\mu\text{m}$									
Flanges	Material	Die-cast aluminum alloy.						Cast iron			
	Paint colour shade Paint	Munsell blue 8B 4.5/3.25 / NCS 4822 BO5G / RAL 5014 Epoxy polyester powder paint, $\geq 30 \mu\text{m}$. 2-pack polyurethane paint, $\geq 20\mu\text{m}$									
Bearings	D-end	6202- 2Z/C3	6203- 2Z/C3	6204- 2Z/C3	6205- 2Z/C3	6306- 2Z/C3	6206- 2Z/C3	6208- 2Z/C3	6309- 2Z/C3	6310- 2Z/C3	
	N-end	6202- 2Z/C3	6203- 2Z/C3	6204- 2Z/C3	6205- 2Z/C3	6206- 2Z/C3	6206- 2Z/C3	6208- 2Z/C3	6209- 2Z/C3	6209- 2Z/C3	
Axially locked bearings	System	Inner bearing circlip, on request. In sizes 71-80 mounting large flange.			Inner bearing cover at D-end.						
Bearing seals	D-end	V-ring									
	N-end	V-ring									
Lubrication		Permanently lubricated bearings. Grease for bearing temperatures $-40\dots+160^{\circ}\text{C}$.									
Terminal box	Material Surface treatment Screws	Die-cast aluminum alloy. Similar to stator. Steel 5 G, chromated.									
Connections	Knock-out openings	1 x M16 + Pg11	2xM20 + Pg16		2 x(M25 + M20)		2 x(M25 + M20)		2 x (M40 + M16)		
	Max Cu area, mm ²	2.5	4		6		10		35		
	Terminal box	Screw terminal, 6 terminals.					Cable lugs, 6 terminals.				
Fan	Material	Polypropylene. Reinforced with 20% glass fibre.									
Fan cover	Material	Steel.									
Stator winding	Material Impregnation Insulation class	Copper. Polyester varnish. Tropicalised. Insulation class F. Temperature rise class B, unless otherwise stated.									
Stator winding temperature sensors		Optional.									
Rotor winding	Material	Die-cast aluminum.									
Balancing method		Half key balancing.									
Key ways		Closed key way.									
Enclosure		Motor, terminal box and brake electrical components: IP 55. Brake mechanical components: IP23 S (IP 55 optional).									
Cooling method		IC 411									

ABB Motors' total product offer

ABB offers several comprehensive ranges of AC motors and generators. We manufacture synchronous motors for even the most demanding applications, and a full range of low and high voltage induction motors. Our in-depth knowledge of virtually every type of industrial processing ensures we always specify the best solution for your needs.

M1000328

Low voltage motors and generators

Process performance motors formore demanding applica- tions

- Cast iron motors
- Premium efficiency motors
- NEMA motors

Industrial performance motors - flexibility for most customer applications

- Aluminum motors
- Steel motors
- Cast iron motors

General performance motors - out-of-the-box simplicity for highvolume customers

- Aluminum motors
- Cast iron motors

Motors for hazardous areas

- Flameproof motors
- Increased safety motors
- Non-sparking motors
- Dust ignition proof motors

Marine motors

- Aluminum motors
- Steel motors
- Cast iron motors
- Open drip proof motors

Other applications

- Open drip proof motors
- Global motors
- Brake motors
- Single phase motors
- High ambient motors
- Permanent magnet motors
- High speed motors
- Wind turbine generators
- Smoke venting motors
- Water cooled motors
- Motors for roller table drives
- Servomotors

High voltage and synchronous motors and generators

- High voltage cast iron motors
- Induction modular motors
- Slip ring motors
- Motors for hazardous areas

- Synchronous motors and generators
- DC motors and generators
- Wind turbine generators
- Traction motors

Low Voltage Motors

Manufacturing sites (*) and some of the larger sales companies.

Australia

ABB Australia Pty Ltd
601 Blackburn Road
Notting Hill VIC 3168
Tel: +61 (0) 8544 0000
Fax: +61 (0) 8544 0001

Austria

ABB AG
Clemens Holzmeisterstrasse 4
A-1109 Wien
Tel: +43 (0) 1 601 090
Fax: +43 (0) 1 601 09 8305

Belgium

Asea Brown Boveri S.A.-N.V.
Hoge Wei 27
BE-1930 Zaventem
Tel: +32 (0) 2 718 6311
Fax: +32 (0) 2 718 6657

Canada

ABB Inc., BA Electrical Machines
10300 Henri-Bourassa Blvd, West,
Saint-Laurent, Quebec
Canada H4S 1N6
Tel: +1 514 832-6583
Fax: +1 514 332-0609

China*

ABB Shanghai Motors Co., Ltd.
88 Tianning Road
Minhang(Economical and Techno-
logical Development Zone)
200245 Shanghai
Tel: +86 21 5472 3133
Fax: +86 21 5472 5025

Chile

Asea Brown Boveri S.A.
P.O.Box 581-3
Santiago
Tel: +56 (0) 2 5447 100
Fax: +56 (0) 2 5447 405

Denmark

ABB A/S
Automation Products
Emil Neckelmanns Vej 14
DK-5220 Odense SØ
Tel: +45 65 47 70 70
